

# ILLUSTRATIONS and TABLES

## FIGURES

### Chapter 1

- 1-1. Study area 6  
1-2. Land use in the region 8

### Chapter 2

- 2-1. Map of wells in database 10  
2-2. Piper diagram showing representation of hydrochemical data 11

### Chapter 3

- 3-1. General location of basins 14  
3-2. Conceptual hydrogeologic model showing undrained basins, partly drained basins, drained basins, and regional sinks 15  
3-3. Two-dimensional conceptual model of a groundwater recharge system in a Basin and Range hydrogeologic setting 16  
3-4. Groundwater flow in the region 18  
3-5. General summary and correlation of lithostratigraphic and hydrostratigraphic units in Upper Cenozoic Basin Fill of the southwestern New Mexico region 20  
3-6. Hypothetical distribution pattern of lithofacies in fault-block basins such as the Albuquerque Basin 24  
3-7. Natural sensitivity of groundwater aquifers to contamination from nonpoint sources 29

### Chapter 4

- 4-1. Land use in the Mimbres Basin 31  
4-2a. Hydrogeologic map of the Mimbres Basin System 33  
4-2b. Hydrogeologic profile for the Mimbres Basin 34  
4-3. Specific capacities for selected Mimbres Basin wells 36  
4-4. Mimbres Basin groundwater contours, flow direction, and stream-aquifer relationships 37

- 4-5. Hydrochemical stiff map for the Mimbres Basin, and associated basins, showing stiff diagrams color coded by TDS ranges 41  
4-6. Piper plots for 7 north-south zones in the Mimbres Basin, and associated basins 42  
4-7. Hydrochemical Piper plot that summarizes mean Piper cluster concentrations for seven zones from Figure 4-6 42  
4-8. Map for the Mimbres Basin, and associated basins, showing chloride concentrations in water wells color coded by range 43  
4-9. Map for the Mimbres Basin, and associated basins, showing sulfate concentrations in water wells color coded by range 44  
4-10. Range of saturation indices of calcite, dolomite, gypsum, and halite for the Mimbres Basin Aquifer 45  
4-11. (Ca + Mg) vs  $\text{HCO}_3$  plot, Mimbres Basin aquifer 46  
4-12. (Ca + Mg -  $\text{SO}_4$ ) vs  $\text{HCO}_3$  plot for groundwaters in the Mimbres Basin aquifer 46  
4-13. (Ca + Mg -  $\text{SO}_4 - 0.5 \text{HCO}_3$ ) vs (Na - Cl) plot, Mimbres Basin aquifer 46  
4-14. (Ca/ $\text{SO}_4$ ) vs Cl plot, Mimbres Basin aquifer 46  
4-15. (Na/Cl) vs Cl plot, Mimbres Basin aquifer 46  
4-16. Conceptual hydrochemical evolution cross-section illustrating chemical reactions and processes that influence the hydrochemistry in the Mimbres Basin aquifer 47  
4-17. Irrigation water quality map for seven north-south zones in the Mimbres Basin, and associated basins 48  
4-18. Map for the Mimbres Basin, and associated basins, showing nitrate concentrations in water wells color coded by range 49

### Chapter 5

- 5-1. Land use in the Hachita-Moscós Basin 51  
5-2. Hydrogeologic map and profile of the Hachita-Moscós Basin 53  
5-3. Hachita-Moscós groundwater contours, flow direction, and stream-aquifer relationships 56

- 5-4. Hydrochemical stiff map for the Hachita-Moscós Basin System, showing stiff diagrams color coded by TDS ranges 58  
5-5. Hydrochemical Piper plots for groundwater in the Upper Hachita Subbasin, Lower Hachita Subbasin, and Wamel-Moscós Subbasin 59  
5-6. Map for the Hachita-Moscós Basin System, showing chloride concentrations in water wells color coded by range 60  
5-7. Map for the Hachita-Moscós Basin System, showing sulfate concentrations in water wells color coded by range 61  
5-8. Range of saturation indices of calcite, dolomite, gypsum, and halite for the Hachita and Northern Moscós Basin aquifers 62  
5-9. Irrigation water quality map for the Upper Hachita Subbasin, Lower Hachita Subbasin, and Wamel-Moscós Subbasin 63  
5-10. Map for the Hachita-Moscós Basin System, showing nitrate concentrations in water wells color coded by range 64

### Chapter 6

- 6-1. Land use in the Playas and San Basilio Basin system 66  
6-2. Hydrogeologic map and profile for the Playas and San Basilio Basin System 68  
6-3. Playas and San Basilio Basin groundwater contours, flow direction, and aquifer-stream relationships 72  
6-4. Hydrochemical stiff map for the Playas and San Basilio Basin System, showing stiff diagrams color coded by TDS ranges 74  
6-5. Hydrochemical Piper plots for groundwater in the Lower Playas Subbasin, Upper Playas Subbasin, and San Basilio Basin 75  
6-6. Map for the Playas and San Basilio Basin System, showing chloride concentrations in water wells color coded by range 76  
6-7. Map for the Playas and San Basilio Basin System, showing sulfate concentrations in water wells color coded by range 77

- 6-8. Range of saturation indices of calcite, dolomite, gypsum, and halite for the Playas Basin aquifers 78  
6-9. Superimposed Piper plots for the Upper and Lower Playas basins (a). Lower diagram shows possible hydrochemical evolutionary trends as groundwater flows north from the Upper Playas Basin into and through the Lower Playas Basin (b) 78  
6-10. Irrigation water quality map for the Lower Playas Subbasin, Upper Playas Subbasin, and San Basilio Basin 79  
6-11. Map for the Playas and San Basilio Basin System, showing nitrate concentrations in water wells color coded by range 80

### Chapter 7

- 7-1. Land use in the Animas Basin 83  
7-2a. Hydrogeologic map of the Animas Basin System 85  
7-2b. Hydrogeologic profile of the Animas Basin 86  
7-3. Animas Basin System groundwater contours, flow direction, and stream-aquifer relationships 91  
7-4. Hydrochemical stiff map for the Animas Basin System, showing stiff diagrams color coded by TDS ranges 94  
7-5. Hydrochemical Piper plots for groundwater in the Animas Basin System 95  
7-6. Map for the Animas Basin System, showing chloride concentrations in water wells color coded by range 96  
7-7. Map for the Animas Basin System, showing sulfate concentrations in water wells color coded by range 97  
7-8. Range of saturation indices of calcite, dolomite, gypsum, and halite for the Animas (a) and Lordsburg (b) Subbasin aquifers 99  
7-9. Hydrochemical plots for groundwater in the Animas subbasins. Figure (a) shows well locations and direction of groundwater flow; (b) shows data for the Animas Subbasin plotted on a Piper plot for three groups of waters; (c) shows apparent evolutionary trends 99

- 7-10. Irrigation water quality map for the Animas Basin System 100
- 7-11. Map for the Animas Basin System, showing nitrate concentrations in water wells color coded by range 101

**Chapter 8**

- 8-1. Land use in the Gila River Basin System 104
- 8-2. Hydrogeologic map of the Gila River Basin System 105
- 8-3. Gila River Basin groundwater contours, flow direction, and stream-aquifer relationships 107

**Chapter 9**

- 9-1. Land use in the San Bernardino Basin 111
- 9-2. Hydrogeologic map and profile of the San Bernardino Basin 112
- 9-3. San Bernardino groundwater contours, flow directions, and aquifer-stream relationships 115
- 9-4. Hydrochemical stiff map for the San Bernardino Basin, color coded by TDS ranges 116
- 9-5. Hydrochemical Piper plots for groundwater in the San Bernardino Basin, U.S. and Mexico 116
- 9-6. Map for the San Bernardino Basin, showing chloride concentrations in water wells 117
- 9-7. Map for the San Bernardino Basin, showing sulfate concentrations in water wells 117
- 9-8. Irrigation water quality map for the San Bernardino Basin, U.S. and Mexico 118
- 9-9. Map for the San Bernardino Basin, showing nitrate concentrations in water wells 118

**CHARTS**

- 3-1. Total annual precipitation Deming, New Mexico, 1948 - 1995 15
- 3-2. Total annual precipitation Lordsburg, New Mexico, 1948 - 1995 15
- 3-3. Total annual precipitation Mimbres Ranger Station, New Mexico, 1948 - 1995 15
- 3-4. Total annual precipitation White Signal, New Mexico, 1949 - 1995 15
- 3-5. Average monthly minimum and maximum air temperature Deming, New Mexico, 1961 - 1982 15
- 3-6. Average monthly minimum and maximum air temperature Mimbres Ranger Station, New Mexico, 1956 - 1996 15

**PLATE**

- 1. Surface Geology and Hydrostratigraphic Units of the Southwestern New Mexico Region  
*contained in folder on inside of back cover*

**CD-ROM**

Trans-International Boundary Aquifers in Southwestern New Mexico - Data and GIS Coverages  
*contained in folder on inside of back cover*

**TABLES**

- 1-1. Irrigated cropland acreage by water source for Grant, Hidalgo, and Luna counties, New Mexico 1990, 1995, and 1998 7
- 1-2. Census population, estimates and projections for Luna, Hidalgo, and Grant counties for 1980, 1990, 1996, and 2000 7
- 1-3. Total water depletions by sector of use and county, 1990 & 1995 7
- 3-1. Selected data on Late Quaternary lakes in southeastern Arizona, southern New Mexico, Chihuahua 19
- 3-2. Post Gila and Santa Fe Group hydrostratigraphic units 22
- 3-3. Gila and Santa Fe Group hydrostratigraphic units 22
- 3-4. Summary of Gila and Santa Fe Group (I-10) and Post-Gila and Santa Fe (a, b, c) lithofacies depositional settings and dominate texture in southwestern New Mexico 23
- 3-5. Summary of properties that influence groundwater production potential of Gila and Santa Fe Group lithofacies 23
- 3-6. Summary of properties that influence groundwater production potential of Post Gila and Santa Fe Group lithofacies 23
- 3-7. Depth-to-water table parameter rating (Dr), weight (Dw), and index (D) 26
- 3-8. Net recharge parameter rating (Rr), weight (Rw), and index (R) 27
- 3-9. Aquifer media parameter rating (Ar), weight (Aw), and index (A) 27
- 3-10. Soil media parameter rating (Sr), weight (Sw) and index (S) 27
- 3-11. Topography parameter rating (Tr), weight (Tw) and index (T) 27
- 3-12. Vadose zone media parameter rating (Ir), weight (Iw) and index (I) 27
- 3-13. Hydraulic conductivity of the aquifer parameter rating (Cr), weight (Cw) and index (C) 27
- 3-14. Areal extent of the natural sensitivity classes in the region 28
