

Surface Water Inflows, Outflows, Gains, and Losses

December 31, 2014 progress report

- Objectives:
- Quantify the volume of streamflow entering and leaving New Mexico at selected stream gages at or near State borders and at Interstate Compact gages and
- Quantify streamflow gains and losses between selected gages in New Mexico.

Results to Date

- Annual and monthly data for selected streams and gages have been tabulated.
- Streamflow data have been loaded into GIS files.
- Draft report has been written and will go to peer review in April.

Work Remaining

- Document digital data sets (metadata).
- Route report through peer, editorial, and bureau approving official reviews.
- Publish report.

Departure of Annual Discharge from Mean Annual Discharge at Rio Grande gages, 1985-2013
