

# SIX CHALLENGE QUESTIONS INTO SUSTAINABLE TRANSBOUNDARY AQUIFERS

## **Panel 2: Estrategias cooperativas sobre Agua Subterránea**

Alfredo Granados-Olivas

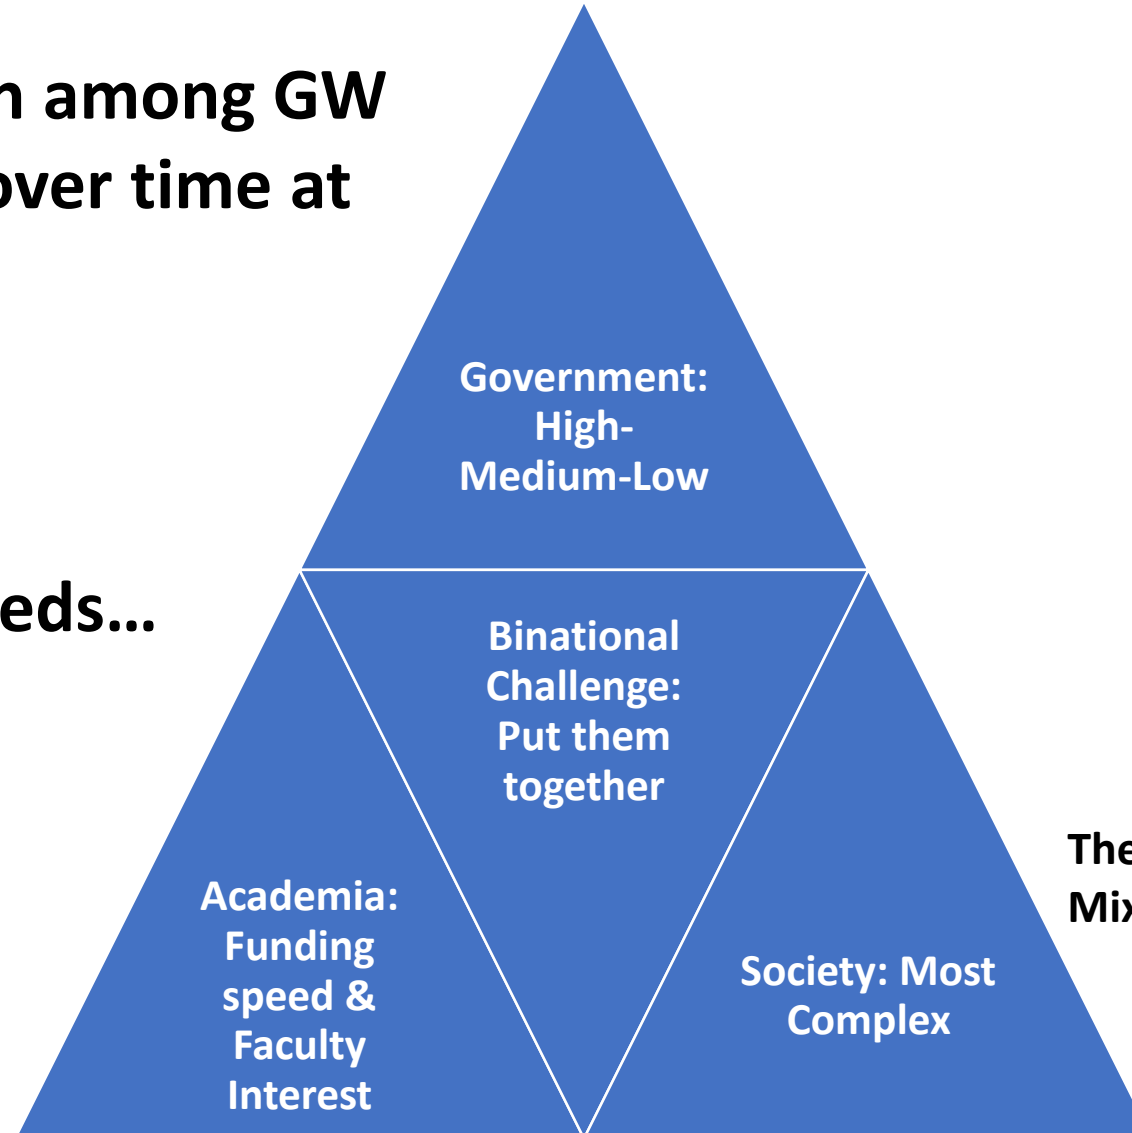

UACJ

April 10, 2019

# Challenge question one....

**How has cooperation among GW institutions change over time at the border?**

**Three levels and speeds...**

**The most complex of all: Requires  
Mix solutions from all of the above**

## **Challenge question 2...**

**What challenges do institutions currently face when managing GW?**

Unfortunately, “Many”.

From a binational perspective, uncertainty and untruthful messages from central governments (both US/MX) are limiting local efforts.

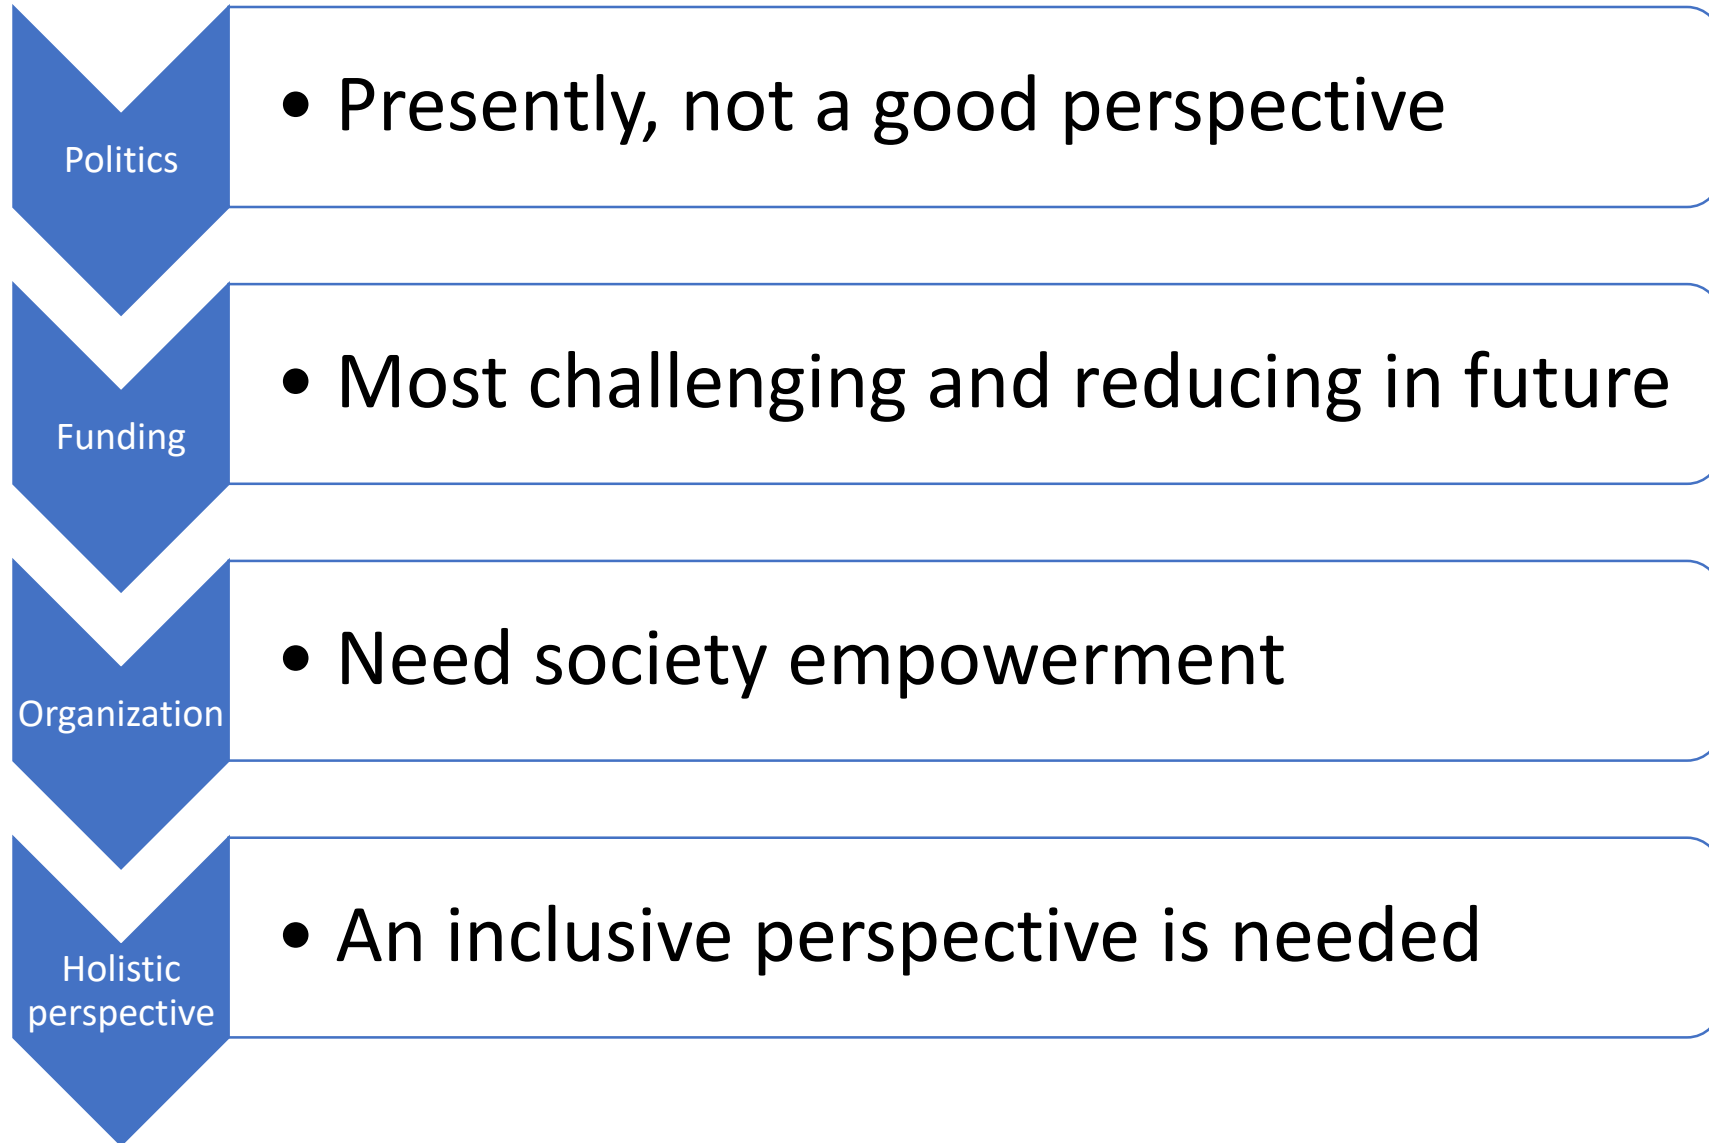

## **Challenge question 3...**

**How do you see institutions involve in GW management over the next 5 years?**

Individually on each country with limiting efforts to have a “common” binational environment to take care and presently we are “competing” to see who wins the “water wars”; however, at the end of the road, no one wins...

# Challenge question 4....

**What opportunities do you see for increasing cooperation between GW users?**

Challenge question 5....

What forms of cooperation do you see in the future?

3 I's of a potential future solution

Information

Involvement

Investment

My message.....

Hopefully, networks (Governments-Academia-Society), can in the future, change the perspective of...

“Whisky is for drinking, and water is for fighting” ...into...

“Tequila is for celebrating...sustainable binational watersheds”
