LIST OF ILLUSTRATION 10

LIST OF TABLES 14

CHAPTER 1 INTRODUCTION 15

Preface..... 15

 Purpose..... 15

 Participating agencies..... 15

 Acknowledgments and disclaimer..... 15

Regional Geographic Setting..... 15

 Location..... 15

 Topography and drainage..... 15

 Climate..... 20

 Population and economy..... 20

 History of ground-water development..... 20

Regional Geologic Setting..... 21

 Geologic characteristics..... 21

 Geologic history..... 21

References..... 24

CHAPTER 2 MESILLA BASIN GROUND-WATER AQUIFER SYSTEM 24

Location and Extent..... 25

History of Ground-water Development..... 25

Ground-water Investigations..... 25

Geologic/Geohydraulic Setting..... 26

 Regional structure..... 26

 Depositional history..... 26

RIO GRANDE FLOODPLAIN ALLUVIUM (New Mexico stream reach)..... 29

Recharge..... 29

Discharge..... 29

Hydrologic Characteristics..... 29

Water Quality..... 29

MESILLA BOLSON..... 29

Saturated Thickness..... 29

Hydrologic Characteristics..... 29

Recharge..... 30

Discharge..... 30

Water Quality..... 30

Volume with Total Dissolved Solids less than 10,000 mg/L..... 30

JORNADA DEL MUERTO BOLSON..... 30

Location and Extent..... 30

Hydrologic Characteristics..... 30

Ground-water Movement..... 32

Recharge..... 32

Water Quality..... 32

WATER USE..... 32

SUSCEPTIBILITY TO CONTAMINATION..... 32

Land Ownership and Land Use..... 32

 Special-use permits..... 32

 Colonias in Doña Ana County..... 38

 Agriculture..... 38

Sources of Contamination..... 38

 Aquifer sensitivity assessment..... 38

 Cropping activity..... 40

 Dairies..... 40

 Septic tanks..... 40

 Particle tracking..... 45

References..... 45

CHAPTER 3 HUECO-TULAROSA AQUIFER 47

Location and Extent..... 47

Stratigraphy and Water-Bearing Characteristics..... 47

 Basin geometry..... 47

 Rock and sediment types..... 47

 Aquifer properties..... 53

Potentiometric Surface Map and Water Levels..... 53

Ground-Water Availability..... 57

Recharge Areas..... 57

Discharge Areas..... 60

Water Quality..... 60

 General hydrochemistry..... 60

 Origin of solutes in the El Paso/Ciudad Juarez area..... 60

 Vertical layering of hydrochemical types in El Paso County..... 65

 Historical change..... 69

Contaminant Susceptibility and Evidence of Contamination..... 69

References..... 75

CHAPTER 4 SOUTHEASTERN HUECO AQUIFER 77

Location and Extent..... 77

Stratigraphy and Water-Bearing Characteristics 77

 Rock and sediment types..... 77

 Aquifer properties 77

Potentiometric Surface Map and Water Levels..... 83

Ground-Water Availability 83

Recharge Areas..... 83

Discharge Areas 83

Water Quality 86

 General hydrochemistry..... 86

 Origin of solutes 86

Ground-Water Movement 86

 Numerical flow modeling..... 86

 Model orientation and design..... 86

 Model results..... 90

 Model analyses 94

 Model limitations 94

Susceptibility to Contamination 100

References 100

CHAPTER 5 RIO GRANDE AQUIFER (Texas/Mexico stream reach) 102

Location and Extent..... 102

Stratigraphy and Water-Bearing Characteristics 102

 Sediment types 102

 Aquifer properties 102

Potentiometric Surface Maps and Water Levels 102

Ground-Water Availability 102

Recharge Areas..... 109

Discharge Areas 109

Water Quality 109

 General hydrochemistry..... 109

 Sources of salinity 109

 Origin of solutes 119

 Historical change..... 119

Susceptibility to Contamination 124

References 124

CHAPTER 6 DIABLO PLATEAU AQUIFER 125

Location and Extent..... 125

Stratigraphy and Water-Bearing Characteristics 125

Potentiometric Surface Map and Water Levels..... 125

Ground-Water Availability 125

Recharge Areas..... 125

Discharge Areas 131

Water Quality 131

 General hydrochemistry..... 131

 Origin of solutes 131

 Isotopic analyses 131

 Historical change..... 131

Susceptibility to Contamination 139

RECOMMENDATIONS..... 140

APPENDIX A List of Water-Related Agencies and Institutions 141

APPENDIX B List of Public Presentations, Articles, and Abstracts 142

APPENDIX C GIS Coverages, Metadata Descriptions, and Ground-Water Sets 144

LIST OF ILLUSTRATIONS

Figure.....	Page
1.1 Location of study area.....	16
1.2 Transboundary aquifers in study area.....	17
1.3 Three-dimensional depiction of surface topography and principal drainages in the transboundary study area.....	18
1.4 Surface drainage basins in the study area.....	19
1.5 Geologic coverage map of the regional study area.....	22
1.6 Conceptual hydrogeologic model showing undrained basins, partly drained basins, drained basins, and regional sinks.....	23
2.1 Shaded relief map with urban and agricultural land use.....	27
2.2 Surface geology of Doña Ana County, New Mexico.....	28
2.3 Water-level contours and selected hydrographs for the Mesilla Bolson and Rio Grande Alluvium aquifers.....	31
2.4 Public water wells, water distribution systems, and land use in Doña Ana County, New Mexico.....	33
2.5 Groundwater depletions by category in Doña Ana County, New Mexico for 1975, 1980, 1985, and 1990.....	34
2.6 Groundwater depletions by category excluding irrigated agriculture in Doña Ana County, New Mexico for 1975, 1980, 1985, and 1990.....	34
2.7 Natural sensitivity of the Mesilla Valley, Doña Ana County, New Mexico.....	39
2.8 Dairies, particle tracking sections, and orchard locations.....	41
2.9 Dairy site map detail.....	42

2.10 Dairy groundwater levels.....	43
2.11 Dairy groundwater nitrate levels.....	44
3.1 Location and extent of the Hueco-Tularosa aquifer.....	48
3.2 Bedrock configuration map beneath the Hueco and Tularosa Bolsons.....	49
3.3 Basin fill thickness map for the Hueco and Tularosa Basins.....	50
3.4 Generalized hydrogeologic cross sections A-A', B-B', and C-C' across the Hueco-Tularosa aquifer.....	51
3.5 Geoelectric cross-section D-D' across the Hueco-Tularosa aquifer, northern Chihuahua, Mexico.....	52
3.6 Comparison of transmissivity values derived from aquifer tests in the Tularosa and Hueco Bolsons.....	54
3.7 Comparison of hydraulic conductivity values derived from aquifer tests in the Tularosa and Hueco Bolsons.....	54
3.8 Regional potentiometric surface map for the Hueco-Tularosa aquifer, illustrating an inset potentiometric surface map for the City of El Paso and Ciudad Juarez.....	55
3.9 Time series hydrographs for the Hueco-Tularosa aquifer.....	56
3.10 Change in water levels for the City of El Paso - Ciudad Juarez area, 1987/1988 to 1992/1993.....	58
3.11 Conceptual diagram illustrating mountain front recharge.....	59
3.12 Major flow components of the Hueco-Tularosa aquifer.....	59
3.13 Ground-water pumpage from the Hueco Bolson; 1903 - 1994.....	61
3.14 Ground-water pumpage from the Hueco Bolson; 1990 - 1994.....	61
3.15 Approximate thickness of the freshwater unit in the Hueco-Tularosa bolson.....	62

3.16 Piper diagrams illustrating geochemical types for the Hueco-Tularosa aquifer.	63
3.17 Geochemical evolution piper diagram for group 3 and group 4 ground waters in the Hueco-Tularosa aquifer.	64
3.18 (Ca + Mg) vs HCO ₃ plot, group 3 and group 4 ground waters.	66
3.19 Ca + Mg - SO ₄ vs HCO ₃ plot, group 3 and group 4 ground waters.	66
3.20 (Ca + Mg - SO ₄ - 0.5 HCO ₃) vs (Na-Cl) plot, group 3 and group 4 ground waters.	66
3.21 (Na/Cl) vs Cl plot, group 3 and group 4 ground waters.	66
3.22 The upward shift caused by removing Hco ₃ from the term (Ca+Mg+Na-SO ₄ -HCO ₃) gives the amount of mass due to dissolution of calcite.	67
3.23 The upward shift caused by removing SO ₄ from the term (Ca+Mg+Na-SO ₄ -HCO ₃) gives the amount of mass due to dissolution of gypsum.	67
3.24 The upward shift caused by removing Cl from the term (Ca+Mg+Na-Cl-HCO ₃) gives the amount of mass due to dissolution of halite.	67
3.25 Stiff diagrams for ground-water samples collected at discrete sample intervals in the El Paso County area.	68
3.26 Comparison of change of chloride concentration in ground water with drawdown in City of El Paso and Ciudad Juarez municipal water wells.	70
3.27 Time series hydrochemical plots for municipal wells in the City of El Paso and Ciudad Juarez area showing increasing concentrations of major elemental constituents in ground water.	71
3.28 Possible sources of salinization of ground water in the City of El Paso/Ciudad Juarez area.	72

3.29 Nitrate concentrations in military, City of El Paso, and Ciudad Juarez municipal wells.	73
3.30 Diagram showing fecal coliform levels in 12 well-water samples collected in the Ciudad Juarez metropolitan area.	74
4.1 Location and extent of the southeastern Hueco aquifer.	78
4.2 Major flow components of the southeastern Hueco aquifer.	79
4.3 Generalized hydrogeologic cross section A - A'.	80
4.4 Geoelectric cross section B - B' across the southeastern Hueco aquifer, northern Chihuahua, Mexico.	81
4.5 Regional potentiometric surface map for the southeastern Hueco aquifer.	84
4.6 Tritium activities (TU) and percentages of carbon-14 in highland (mountain and slope front) and lowland (basin floor) areas of the southeastern Hueco aquifer indicate that precipitation recharge occurs primarily within the upper mountains and plateaus, and across the broad alluvial fans that border mountain fronts.	85
4.7 Hydrochemical piper plots for the bedrock (mountain and plateau) strata, bolson strata, and Indian Hot Springs.	87
4.8 Scatter plots showing (Na/Cl) molar ratios vs molar Cl for samples collected from the bedrock (mountain and plateau) strata, bolson strata, and Indian Hot Springs.	88
4.9 Scatter plot showing (Cl/Br) molar ratios vs molar Cl for samples collected from the bedrock (mountain and plateau) strata, bolson strata, and Indian Hot Springs.	88
4.10 Scatter plots showing (Na-Cl) molar quantities vs molar SO ₄ for samples collected from the bedrock (mountain and plateau) strata, bolson strata, and Indian Hot Springs.	88

4.11	Diagram showing the gridding scheme, the aquifer zones, and the boundary conditions selected for the numerical profile model oriented between the Diablo Plateau and the Sierra de San Ignacio.	89
4.12	Recharge rates and comparison between measured and simulated hydraulic heads in the transboundary profile model.	92
4.13	Particle trajectories do not form a perfect mirror image where they upwell beneath the international boundary.	92
4.14	Simulated pathlines in the numerical profile model.	93
4.15	Recharge rates and comparison between measured and simulated hydraulic heads in model scenario 1.	95
4.16	Pathlines suggest greater movement of ground water into Mexico with lower recharge rates in the Sierra de San Ignacio, model scenario 1.	95
4.17	Comparison of unstressed hydraulic head and pumping hydraulic head in the numerical profile model, model scenario 2.	96
4.18	Pathlines originating in Mexico move across the international border to pumping cones of depression in model scenario 2.	96
4.19	Diagram showing flow capacity and absence of flow capacity in the highland bedrock aquifers.	97
4.20	Drains specified at land surface elevation in the numerical profile model, model scenario 3.	98
4.21	Comparison of initial simulated hydraulic head and simulated hydraulic head at flow capacity, and recharge rates at flow capacity, model scenario 3.	98
4.22	Binary plot of $\delta^2\text{H}$ versus $\delta^{18}\text{O}$ values for vadose zone and saturated zone waters in the southeastern Hueco aquifer.	99

4.23	Conceptual model showing mountain and mountain front recharge and the absence of precipitation recharge along the basin floor due to the substantial excess of evapo-transpiration over precipitation.	99
5.1	Location and extent of the Rio Grande aquifer in the study area.	103
5.2	Water-level contour map for the Rio Grande aquifer in El Paso and Hudspeth Counties, 1973 and 1974.	104
5.3	Water-level contour map for the Rio Grande aquifer in El Paso and Hudspeth Counties, 1994 and 1995.	105
5.4	Diagram illustrating underflow, baseflow, losing stream, and a mixed system that includes underflow and baseflow components of flow in an alluvial aquifer hydraulically connected to a stream.	106
5.5	Hydrographs illustrating water-level changes in the Rio Grande aquifer in El Paso County between 1970 and 1995.	107
5.6	Hydrographs illustrating water-level changes in the Rio Grande aquifer in Hudspeth County between 1970 and 1995.	108
5.7	Major flow components in the Rio Grande aquifer.	110
5.8	Located adjacent to the Rio Grande, well 48-41-624 had increasing total dissolved solids in samples collected between 1986 and 1988. When the well was resampled in 1989, total dissolved solids had decreased substantially.	111
5.9	Stiff plots show Na-SO_4 and $\text{Na-SO}_4\text{-Cl}$ ground waters with salinities usually less than 3,000 mg/L in the Rio Grande aquifer above the El Paso/Hudspeth county line.	112
5.10	Stiff plots show $\text{Na-SO}_4\text{-Cl}$ ground waters with salinities usually greater than 3,000 mg/L in the Rio Grande aquifer below the El Paso/Hudspeth county line.	113

5.11	Diagram showing how solutes in irrigation water become concentrated in irrigated soils due to high evapotranspiration rates.	114
5.12	Diagram comparing water quality and streamflow discharge for the Rio Grande at El Paso and Ft Quitman, 1973 and 1991.	115
5.13	River salinities fluctuate downstream of El Paso due to inflows from several sources that both dilute and enrich Rio Grande water with respect to total dissolved solids.	117
5.14	Piper diagrams shown in time series that illustrate surface water at the El Paso and Fort Quitman gage stations, January, 1970 - 1991 (a) and July, 1970 - 1991 (b).	118
5.15	Piper diagrams for the Rio Grande aquifer in El Paso and Hudspeth counties.	118
5.16	Comparison of discharge quantities in the Rio Grande at El Paso and Fort Quitman.	120
5.17	Binary plot of $\delta^2\text{H}$ versus $\delta^{18}\text{O}$ values for Rio Grande aquifer in the Mexican part of the alluvial aquifer.	120
5.18	Scatter plot showing (Na/Cl) molar ratios vs molar Cl for samples collected from the Rio Grande aquifer in El Paso and Hudspeth Counties.	120
5.19	Scatter plot showing (Ca+Mg)/ HCO_3 molar ratios vs molar Cl for samples collected from the Rio Grande aquifer in El Paso and Hudspeth Counties.	120
5.20	Scatter plot showing (Ca/ SO_4) molar ratios vs molar Cl for samples collected from the Rio Grande aquifer in El Paso and Hudspeth Counties.	120
5.21	Scatter plot showing (Mg/ SO_4) molar ratios vs molar Cl for samples collected from the Rio Grande aquifer in El Paso and Hudspeth Counties.	120
5.22	Time series graph of increasing salinities in the Rio Grande.	121

5.23	Diagrams illustrating contamination of an alluvial aquifer from a contaminated stream.	122
5.24	Bankfiltration during induced infiltration from a river to a high-capacity well in a porous alluvial aquifer.	123
6.1	Location and extent of the Diablo Plateau aquifer and surrounding region.	126
6.2	Regional potentiometric surface map for the Diablo Plateau aquifer and surrounding region.	127
6.3	Hydrographs of selected wells in the Dell City area.	128
6.4	Map showing tritium activities (TU) and percent modern carbon (PMC) of ground water in the Texas portion of the Diablo Plateau aquifer.	129
6.5	Major flow terms in the Diablo Plateau aquifer system.	132
6.6	Areal distribution of ground-water facies in parts of the Texas and New Mexico portions of the Diablo Plateau aquifer.	133
6.7	Plot of (Ca + Mg) vs HCO_3	134
6.8	Plot of (Ca + Mg - SO_4) vs HCO_3	134
6.9	Plot of (Na - Cl) vs (Ca + Mg - SO_4 - 0.5HCO_3).	134
6.10	Plot of (Na/Cl) ratio vs Cl.	134
6.11	Piper diagram illustrating geochemical types for ground water in the Diablo Plateau aquifer.	135
6.12	Plot of $\delta^2\text{H}$ vs $\delta^{18}\text{O}$	136
6.13	Chemical composition of Dell City ground waters in 1948 and 1992.	137
6.14	Major ion chemistry changes through time for well 48-07-205.	138

LIST OF TABLES

Table Page

2.1 Water use by category in Doña Ana County, New Mexico
in 1990 in acre-feet. 35

2.2 Water use by category in Doña Ana County, New Mexico
in 1985 in acre-feet. 36

2.3 Water use by category in Doña Ana County, New Mexico
in 1980 in acre-feet. 36

2.4 Water use by category in Doña Ana County, New Mexico
in 1975 in acre-feet. 37

2.5 Summary of groundwater depletions by category for
Doña Ana County, New Mexico, 1975, 1980, 1985, and 1990. 37

4.1 Transmissivity values derived from aquifer tests in the
southeastern Hueco aquifer. 82

4.2 Numerical profile model parameters, by zone. 91

6.1 Transmissivity values derived from aquifer tests in the Diablo
Plateau aquifer. 130
