

PLATE 11. Index map for (1) aquifer-management units in Mexico and (2) major hydrogeologic subdivision in the United States south of 32° N latitude. The Acuífero Conejos-Médanos “delineación oficial” and the Zona Hidrogeológica de Conejos Médanos boundary are bounded, respectively, by dash-dot gray and solid yellow lines (INEGI 2012). The dashed-blue line shows the general position of the Historic GW-flow divide between NE-directed underflow toward the lower Mesilla Valley, and SW-directed underflow toward the present ephemeral-lake plain (El Barreal) in the northwestern Zona Hidrogeológica de Conejos Médanos. 2018 Google Earth® image-base.
