

# **New Mexico Statewide Water Assessment: Surface Water**

## **■ Objectives and Benefits**

- Quantify the volume of streamflow entering and leaving New Mexico**
- Identify stream reaches where streamflow gains and losses occur**
- Provide streamflow data in a GIS format so that streamflow data can be integrated into Statewide Water Assessment database**
- Provide water managers the data needed to balance water supply with immediate and future water demand**

# Major Streams and USGS Stream Gages

- Rio Grande
- Pecos River
- Canadian River
- San Juan River
- Gila River
