

TABLE OF CONTENTS

Conference Planning Committee	4
Program	5
Introduction	7
Conference Objectives	7
Break-out group participants	8
Plenary Session Speaker PowerPoint Slides	
Guillermo Zaragoza, Promotion of Renewable Energies for Water Production through Desalination	11
Bekele Debele, Renewable Energy Desalination: An Emerging Solution to Close MENA’s Water Gap	45
David Furukawa, NCED Australia Research Update	51
Joseph Jacangelo, WateReuse Research Foundation: To Conduct and Promote Applied Research on the Reclamation, Recycling, Reuse and Desalination of Water	59
Kevin Black and Mitch Haws, Reclamation Rural Water Act: Southwestern Navajo Rural Water Supply Project and Solar Groundwater Desalination Research.	71
Ali Al-Qaraghuli, Renewable Energy Applications in Water Desalination	79
The Two Top-ranked Project Descriptions	
The Project Receiving the Most Votes by Conference Participants: Solar Project	89
The Project Receiving the Second Most Votes from Conference Participants: Water Resources Project	91
List of Project Summaries	93
Audience Suggestions	94
Project Summaries	
Action	
1. BGNDRF external actions for improved integrated renewable energy/water purification and desalination research and testing	95
2. BGNDRF internal actions for integrated renewable energy/water purification and desalination research and testing	96
Environmental Impacts	
1. Development of cost-effective enhanced evaporation techniques	97
2. Conversion of concentrate stream to food, feed and biofuel	98
3. Development of cost-effective re powered small brackish water /wastewater treatment systems for stand-alone rural communities	99
4. Pilot project at schools to demonstrate renewable energy, water, wastewater systems.	100
5. Combining concentrate with wastewater to produce algae biofuels	101
6. Guidance document for selection and operation and management of small sustainable water/ wastewater systems.	102

Geothermal	
1. A survey of existing geothermal power plants and direct use facilities to determine near-term feasibility to cascade geothermal and heat energy water for desalination103
2. Recovery of minerals from geothermal brines.104
3. Development of a users' guide for assessing feasibility of geothermal technologies for small-scale, brackish desalination systems.105
Infrastructure	
1. Technical and economic comparison of reverse osmosis and electro dialysis brackish water desalination units powered by hybrid wind/photovoltaic systems106
Institutional Considerations	
1. Guidance manual on financial implementation of renewable energy-desalination projects - options and implementation109
2. Characterization of the brackish groundwater source in the United States110
3. Brackish groundwater treatment technologies111
4. Identify and characterize stakeholders and their role in renewable energy (RE) - desalination implementation112
Solar	
1. Design of a high yield integrated concentrated photo voltaic and solar thermal system that produces power and supports advanced water treatment of brackish water to serve remote and rural communities water and energy needs114
Water Resources	
1. Desalination technologies and trace contaminants115
2. Tapping on unutilized waste heat energy available in power generation facilities for co-generation of water117
Wind	
1. Guidebook for implementation of renewable energy for desalination for small systems.118
2. Which high-risk wind research projects are suitable for further exploration?119
3. Hybrid wind with vertical solar for desalination121
4. Capture of more atmospheric processes in wind energy assessment approaches.122
5. Direct use of mechanical energy from wind power for desalination124
6. Grid independent green pc technology for energy optimization (patent-pending)125
Presentation Abstracts.127
Poster Abstracts143
Appendix A	
Project Description Sheet157
Participant Instructions159
Facilitator Instructions.161
